

MANITOWISH WATERS ROAD DEPARTMENT

December 6, 2018

NOVEMBER ROAD REPORT

So much for global warming, yet another month with below normal temperatures.

Winter road procedures for the month: PLOWINGS (4)
SANDINGS (2)

It was late in the season but finally the Clear Lake road bridge approach project and the paving of the road has been completed. But it is still imperative that the gas line adjacent to the project be buried accordingly.

The Koller Park docks along with the old Rest Lake Park's have been removed for the season.

Three hundred cubic yards of sand and twenty tons of salt have been received at the town garage. It was subsequently mixed together and placed in the salt shed readying it for the winter season.

The Airport road Christmas pole lights and banners have been installed. Under a new directive from Excel Energies, ornamental lighting cannot be installed on the downtown power distribution poles and other distribution poles throughout the town,

At the Transfer Site as we all know, the brush pad has gone completely out of control since letting in contractors dispose of their "waste". We attribute that 80% of the brush is generated by contractors. Of which how much comes from other townships? The Brush Pad area was put there for the convenience of the town's everyday home owner who would fill up the back of a pickup or bring in a small trailer filled with brush and not be more than six inches in diameter.
