

Greg Sass will be speaking at the Manitowish Waters Community Center on Thursday, June 28 at 6:30 pm on his "Wood in the Water" studies and its effects on Walleye reproduction. Greg's presentation includes:

- The role of habitat
- The importance of assessing habitat prior to stocking
- The inverse relationship between wood in the water and residential development
- Case studies on Little Rock Lake, Camp Lake, and Sanford Lake (Dairyman's)
- Fish sticks/tree drops vs. fish cribs
- The importance of monitoring before and after making habitat additions
- Finding a safe operating space for fisheries
- WI legislation related to habitat additions

Everyone is invited to attend. No charge. This is sponsored by the Headwaters Basin Chapter of Walleyes for Tomorrow. For more information call Tom Kramer@ 715-904-0182
